

#1 priority, day-to-day operations level, both Drill-down and Roll-up needed to equal degree, concerns over scalability of multi-faceted comparisons, filtering and aggregating by tag, by rank, or by value necessary.

#1 priority, "need to have"

**portfolio level:** rank groups of spaces based on multiple measures of performance, sub-rank within groups. Compare changes in rank over time.

#2 priority, would be less frequently used than portfolio / detail level, though helpful for generating reports and communicating to decision makers.

**portfolio / detail level:** multi-faceted comparison of portfolio performance over time.

**Drill-down:** split portfolio into spaces OR groups of spaces.

**Roll-Up:** determine contribution of spaces OR groups of spaces to overall portfolio performance.

#3 priority "would be nice to have"

**space level:** compare a single space's performance over time.

#2 priority: "need to have"

#3 priority, would still be used (all ideas are interesting), but not as highly prioritized as others.
